

ERUPTING EUROPE

To begin this unit of work, as Geographers we will recap prior knowledge of the oceans and continents of the world.

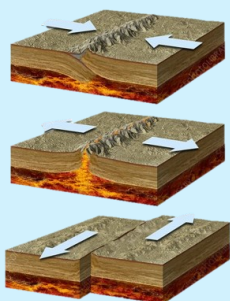

Following this, we will locate and compare countries within the Northern Hemisphere, exploring their climates and human and physical features. We will also explore the different symbols used on maps.

To develop our geographical skills further, we will study the human and physical features of Italy followed by a focus on the lives of people who live there.

Following the study of Italy, we will practice our food preparation skills. This will lead to the designing, making and tasting of our own Italian Piadina products for the end of unit market.

Drawing upon our knowledge learnt in Science, we will next explore the structure of the Earth and the formation of volcanoes. This will lead onto the creation of our own model volcanoes.

Finally, we will use all of our skills and knowledge to create different stalls for our own European Market.
